British Gas, one of the leading energy suppliers supplying over 12 million UK homes, commissioned GNA in a QS capacity following the governments Green Deal scheme in October 2012.

Our purpose was to provide valuations for internal and external works as part of the 62,000 measures in just under 30,000 dwellings British Gas installed in on homes throughout the U.K by regionally selected contractors.

We ensured value for money for their investment through accurate onsite measurements and worked closely with local contractors to ensure fair and prompt valuations to reflect works done. We have worked throughout the U.K for British Gas, working in Salford, Wallasey, Rotherham, Southwark, Norwich and Stockport on major housing projects including high rise buildings and residential areas.
